Re: Reference for Howell Davies Principal Welding subcontractor

Howell Davies Welding have been the Principal Welding subcontractor to the Origin/MCJV Gas Pipeline Project, Miles to Curtis Island. As the Origin Company Representative on this project I have been extremely pleased with the professional standard of Welding Services and Project Management which Howell Davies has brought to this project.

As the Principal Welding Services Provider on this pipeline, Howell Davies have successfully welded over 500km of 36" and 42" inch pipe with an impressively low repair rate, which when benchmarked against other pipeline projects, sets them ahead of the field. Repair Rates combined with productivity levels and stability in staffing, has ensured that Howell Davies has not only met but exceeded, our expectations.

Howell Davies successful provided all welding services for the Mainline, Tie Ins and Facilities sections of this project.

Jonathan Davies and his team of Supervisors, Welders and auxiliary staff are experts in their field. They have an understanding of the constraints of this industry, know what it takes to get the job done to a high standard and produce.

Having personally witnessed the Howell Davies Team on this project for the last 18 months I believe I am more than qualified to provide this reference.

I would definitely recommend Howell Davies Welding to any company seeking the services of a multi faceted professional welding services provlder.

Sincerely,

Johnny T. Bracken
